

Stakeholder Analysis

- ❖ This section identifies the individuals and entities that have a vested interest in PortfolioGenie and outlines their specific requirements to ensure the platform's success.

A.Stakeholder Identification & Needs Matrix:

Stakeholder Category	Primary Needs & Expectations
Junior Developers (Primary Users)	• Seamless integration with GitHub to fetch repositories. • An intuitive, multi-step UI to simplify the portfolio-building process. • AI assistance to overcome "writer's block" when describing projects.
Recruiters & HR Managers (Target Audience)	• High-performance, fast-loading portfolios. • Standardized, professional layouts that highlight key skills quickly. • Error-free, SEO-optimized content that reflects the candidate's actual coding style.
Technical Interviewers	• Clear links to source code and live demos. • Accurate representation of the developer's contributions and technical stack.
System Administrator (The Developer)	• Scalable architecture using React best practices. • Cost-effective management of AI API usage (Prompt Engineering efficiency).

Stakeholder Category	Primary Needs & Expectations
	Secure handling of GitHub OAuth and user data.

B. Detailed Stakeholder Profiles:

1. The Junior Developer (The Client)

As the core user, their main pain point is the difficulty of “selling themselves.” They need a tool that acts as a bridge between their raw code (GitHub) and a professional presentation.

Key Deliverable: A dynamic, easy-to-use builder that produces a high-quality portfolio with minimal manual effort.

2. Recruiters & Hiring Managers (The Decision Makers)

While they don’t use the builder, they consume the output. Their need is efficiency. A portfolio generated by PortfolioGenie must be concise, professional, and accessible.

Key Deliverable: Portfolios that are mobile-responsive and follow accessibility (A11y) standards to ensure a positive first impression.

3. API Providers (GitHub & OpenAI)

The platform relies on these external services. Compliance with their rate limits and data privacy policies is crucial for the long-term reliability of the system.

Key Deliverable: Secure API integration and optimized prompt structures to minimize latency and costs.

Conclusion

By balancing the needs of the Junior Developer (ease of use) with the needs of the Recruiter (professional output), PortfolioGenie ensures a high value-driven experience for all parties involved in the hiring ecosystem.
